EXPERIENCE

Celonis, Munich – *Product Strategy & Operations – AI & Data Analyst*

Oct 2025 - April 2026 (7 Months)

- Led development of AI-driven analytics solutions transforming raw product and process data into actionable business insights for strategic decision-making.
- Engineered Python and SQL pipelines processing 1,000+ feature datasets, reducing decision-making time by 50% across product teams.
- Built machine learning classification models improving routing accuracy by 25%, enabling scalable automation of operational workflows.
- Automated GenAI-based analytics workflows using LangChain, reducing manual analysis effort by 80% across 20+ KPIs.
- Delivered stakeholder-facing dashboards in Power BI, identifying capacity risks 30% faster and supporting data-driven planning.
- Translated business use cases into production-ready AI solutions, aligning technical outputs with stakeholder expectations and product strategy.

BMW AG, Munich – *Process AI – AI / ML Engineer & Data Analyst*

April 2024 - Oct 2025 (1.5 Years)

- Delivered end-to-end AI and data analytics solutions for process optimization and forecasting across engineering and operations teams.
- Built machine learning models (Random Forest) achieving 95% forecasting accuracy, directly supporting operational planning decisions.
- Designed emissions forecasting systems improving prediction accuracy from 78% to 92%, enabling scenario-based risk evaluation.
- Automated data pipelines and GenAI workflows, reducing insight generation time by 60% for engineering stakeholders.
- Developed KPI dashboards and simulations in Power BI, accelerating process optimization decisions by 50%.
- Conducted advanced data analytics on process datasets, uncovering performance gaps and improving resource allocation strategies.
- Delivered consulting-style insights by translating complex data into clear business recommendations for cross-functional stakeholders.
- Implemented CI/CD-based ML monitoring pipelines, reducing reporting delays by 40% and ensuring reliable data products.

Lacritz AI, Remote – *Machine Learning Intern*

May 2023 - July 2023 (3 Months)

- Built NLP pipelines using BERT and AWS services to automate anomaly detection across large-scale document datasets.
- Improved model performance to 85% accuracy through feature engineering and optimization of inference pipelines.
- Reduced system latency by 30% through efficient query handling and model deployment improvements.

Job-Related Abilities

End-to-End AI Solution Delivery: Proven ability to design and deploy machine learning and AI systems from data ingestion to stakeholder-facing insights.

Business-Oriented Data Analytics: Strong experience translating complex datasets into actionable business recommendations aligned with use cases.

Stakeholder Communication: Proven delivery of dashboards, forecasts, and insights tailored to technical and non-technical stakeholders.

Scalable Data Engineering: Expertise in building robust Python/SQL pipelines and cloud-based architectures for high-volume analytics.

Technical Proficiency

Programming Languages

Python, SQL, C++, Pandas, NumPy

Machine Learning / GenAI

Scikit-learn, TensorFlow, PyTorch, LangChain, Transformer models

Analytics and BI

Power BI, KPI Development, Statistical Analysis, Process Mining, Business Intelligence

Data and Infrastructure

ETL Pipelines, Snowflake, Databricks, PostgreSQL, AWS Glue

Tools and Platforms

Celonis, AWS (SageMaker, Lambda, EC2), Docker, MLflow, GitHub Actions

Johnson Controls, India – *Engineering & Automation Analyst*

Oct 2021 - December 2022 (1 Year)

- Delivered data-driven automation solutions for engineering systems, improving operational efficiency across industrial workflows.
- Built simulation models for process optimization, generating 15% efficiency improvements in production-like environments.
- Developed data pipelines and basic ML models supporting production processes, reducing operational delays by 10%.

RECENT PROJECTS

Sales Analytics Data Warehouse Modernisation [\(Link\)](#)

- Designed Bronze-Silver-Gold data warehouse with star schema and automated incremental ETL pipelines (deduplication, SCD handling), reducing query latency by 50% via partitioning/indexing.
- Skills: Data Engineering, ETL, Data Warehousing, Power BI, SQL

Time Series Forecasting with Foundation Models [\(Link\)](#)

- Built a time series forecasting system using rolling-window backtesting, benchmarking classical models (ARIMA) against foundation models (TimeGPT, Chronos, TimesFM), incorporating external features (publishing events, holidays).

Multi-Agent LLM System using MCP | BMW

- Built a multi-agent LLM system enabling structured context sharing, tool invocation, and agent coordination across complex workflows using Python agent workflows for task decomposition, context routing, and reasoning.
- Skills: Agentic GenAI Systems, LLMs, Multi-Agent Coordination, MCP

EDUCATION

Hochschule Schmalkalden, Germany – M.Eng Oct 2022 - Dec 2025 *AI Product Development*

- **Relevant Coursework:** Artificial Intelligence, Robotic Vision, Computational Science, Statistics, Image Processing, Project Management
- **Master's Thesis (BMW Group):** Developed AI/ML pipelines for customs automation and process forecasting, achieving 92-95% accuracy in trade risk prediction and emissions modeling.

Jain University, India – B. Tech Jun 2017 - Jul 2021 *Industrial Design*

- **Relevant Coursework:** Machine Design, Programming Languages, Applied Mathematics, Economics, and Inventory Design
- **Bachelor's Thesis:** Analysed supply chain datasets to build a demand forecasting model as a foundation for an automated inventory optimisation.

Professional Skills

Stakeholder Communication, Business Problem Framing, Consulting Delivery, Process Optimization, Cross-functional Collaboration
